BLAZER BAY

At Blazer we concentrate our efforts on making the best boats, not the most boats. Each Blazer Bay is handcrafted and built to customer specifications, so your boat can be designed to be one of a kind. A Blazer is an investment, and we can tailor it for you. You can choose from nearly endless options to make your Blazer custom to your recreation and fishing needs.

WE BUILD BLAZERS WITH THE HIGH PERFORMANCE ANGLER IN MIND.

BLAZER HERITAGE

Blazer stepped into the market in 1978 with powerboats that instantly outperformed competitors. Keith and Lonnie Craft began with a small line of boats and grew the business to become a strong factor in the high performance Bass and Bay Boat markets.

We continue to strive to build the highest quality boats in today's market. Blazer Boats are designed and hand-crafted for tournament fishermen by tournament fishermen.

100% COMPOSITE HULL

Blazer has developed industry leading techniques and procedures that assure the highest quality, strongest and most durable boats on the market. The building process begins with the application of gel coat, then the first layer of fiberglass is applied.

Alternating layers of matte and woven glass are sandwiched to make the strongest possible hull.

Each layer is hand laminated as it is applied for the most in uniformity and strength.

2700 HYBRID BAY

2700 HYBRID BAY
